

EVADO INFORMED CONSENT

Evado Informed Consent is a fully compliant paperless app that ensures that patients are fully informed before they decide whether to enroll in a trial or study. Evado eConsent has built in compliance monitoring that can be run on either a desktop or a tablet computer. Audio visual and cartoon graphics can be included to enhance patient comprehension. Evado's compliant signature collection has inbuilt auditing and meets current EU and USA regulatory and privacy requirements including GCP, GDPR and HIPAA. Evado's Informed Consent can be run as a stand alone app or integrated into Evado Clinical.

The eConsent module includes:

- Evado supports up to 4 different consent forms to manage any changing consenting requirements throughout the execution of the study.
- Design tools assist in the creation of the informed consent form. A form can be broken into one or more sections or groups with each section or group containing one or more page fields.
- The eConsent form supports rich text, videos, images and quizzes.
- If preferred, the patient consent form can be completed at a clinic assisted by local staff and signed off by the patient.
- Registered patients can complete the informed consent online anonymously.
- Sites can monitor the progress of each participant's consenting process.
- Full audit-trails are kept of all the patient consent data.
- All patient personal information is stored in an encrypted format and time date stamped.

Evado e-Informed Consent

- Full privacy management ensures that only site users can view participant data.

The FDA Informed Consent guidelines state that the purpose of the research must be explained to patients including the patient's role in the study and how the study would run.

Evado Informed Consent isn't just a signature confirming that a patient will participate in a study. Informed consent opens up opportunities for patient recruitment and retention that keeps patients interested and involved in the study. This also benefits patients with low health literacy as the paper based systems can be confusing, alternatively eConsent ensures that patients are fully informed. There are long-term financial advantages for sponsors and patients benefit by being fully invested in the studies they participate in. Best of all, patients will comprehend and agree to participate in a study in an informed and meaningful way.

Informed Consent is suitable for remote studies as well as studies that are conducted in the clinic or hospital. Some patients prefer to upload their study data in their own home and Evado has provided a way for home based patients to remain anonymous if they so wish. Industry figures demonstrate that patients are much more likely to complete the trial if they use an Informed Consent application.
